## AAA BALSA

September 1, 2010

Our balsa wood is a kiln-dried product from various South American mills. Balsa wood has a high strength to weight ratio and is the desired species for many modeling projects.

This wood is also used for many types of crafts and architectural projects due to the ease in workability, cutting easily with a hobby knife. We are proud to state Bud Nosen Models offers a large selection of sizes and shapes to suit every modeler's needs.

## PLYWOOD

September 1, 2010

Birch model aircraft plywood is high quality plywood with a minimum of 3 to 5 laminations determined by thickness. Our plywood is imported from Finland, from the only mill in the world producing this product. Birch plywood takes paint or varnish well and can be used in laser cut applications.

Lite poplar plywood is a less expensive option for buyers not needing the strength which birch plywood provides.

We take great pride in the quality of our hardwood, as it is hand selected and graded to provide an excellent product to even the most discriminating buyer. Walnut and cherry tend to be the most popular hardwoods in many areas but especially the crafting and dollhouse market. A saw is needed to cut all types of hardwoods.
